Our Product

About GentleLASE laser system

The GentleLASE laser system treats most skin types quickly, comfortably and effectively. GentleLASE offers fast treatment times and unparalleled efficacy. Capable of treating unwanted hair, wrinkles and sun spots.

The GentleLASE system, a revolutionary long-pulse high energy Alexandrite laser emits a gentle beam of light that passes through the skin to the hair follicle where it is absorbed. The laser energy is transformed into heat, which destroys the hair follicle leaving the surrounding skin unaffected. The skin is further protected during the treatment by a Dynamic Cooling Device where cryogen is sprayed onto the skin cooling the upper layers providing increased comfort. We do not use any pre-treatment gels, the cryogen provides very effective cooling so numbing gels are not needed for laser hair removal. The GentleLASE effectively protects the skin while eliminating the unwanted hair.

Procedures

- Laser hair removal
- Electrolysis
- Massage therapy
